 - (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method;
 - (2) the details of subsequent stages of selection and multiplication;
 - (3) evidence of uniformity and stability; and
 - (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified

 - (1) identify these varieties and state all differences objectively;
 - (2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and
 - (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 18c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
21. See Section 83 of the Act for the Contents and Term of Plant Variety Protection.
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.

21. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

22. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

23. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder's Right or Patent).)

NOTES: It is the responsibility of the applicant/owner to keep the PVPO informed of any changes of address or change of ownership or assignment or owner's representative during the life of the application/certificate. There is no charge for filing a change of address. The fee for filing a change of ownership or assignment or any modification of owner's name is specified in Section 97.175 of the regulations. (See Section 101 of the Act, and Sections 97.130, 97.131, 97.175(h) of the Regulations and Rules of Practice.)

Exhibit A. Origin and Breeding History of the Variety

Soybean Variety 91B12

Variety 91B12 evolved from a 1994 cross of ST1570/5/A1900/4/9304/3/9412//A4715/9392 G40-3.

It is an F4-derived variety, which was advanced to the F4 generation by modified single-seed descent. The F5 progeny row of 91B12 was grown in a plant row yield trial in the summer of 1996. Subsequently, 91B12 has undergone four years of extensive testing and purification and has been observed by the breeder to be uniform and stable for all plant traits from generation to generation, with no evidence of variants. On the basis of yield and resistance to Roundup labeled herbicides, variety 91B12 was assigned a commercial number.

The purification block was grown during summer 1998 and 57 sublines were bulked for increase. 48 acres of 91B12 (breeders seed) were grown in the summer of 1999. 1802 acres of parent seedstock (foundation seed equivalent) were grown in the summer of 2000 and 59201 bushels were harvested.

200100061

Exhibit B. Statement of Distinctness

Soybean Variety 91B12

Variety 91B12 is most similar to variety 91B02. Both varieties have purple flowers, tawny pubescence, yellow seeds with black hila, and are resistant to Roundup branded herbicides. However, 91B02 is resistant to race 7 of *Phytophthora megasperma* var. *sojae* whereas 91B12 is susceptible.

Variety 91B12 is also similar to 91B33. Both varieties have purple flowers, tawny pubescence, and resistance to Roundup branded herbicides. However, 91B12 has yellow seeds with black hila and is susceptible to race 5 of *Phytophthora megasperma* var. *sojae* whereas 91B33 has yellow seeds with brown hila and is resistant to race 5 of *Phytophthora megasperma* var. *sojae*.

Variety 91B12 is also similar to 90B93. Both varieties have purple flowers, tawny pubescence, black hila, and resistance to Roundup branded herbicides. However, 91B12 is susceptible to race 7 of *Phytophthora megasperma* var. *sojae* whereas 90B93 is resistant to race 7 of *Phytophthora megasperma* var. *sojae*.

Variety 91B12 is also similar to S12-49 from Novartis Seeds. Both varieties have purple flowers and tawny pubescence. However, 91B12 has yellow seeds with black hila, resistance to Roundup branded herbicides, and is susceptible to race 7 of *Phytophthora megasperma* var. *sojae* whereas S12-49 has yellow seeds with gray hila, is resistant to Roundup branded herbicides, and is resistant to race 7 of *Phytophthora megasperma* var. *sojae*.

Variety 91B12 is also similar to AG1101 from Asgrow Seeds. Both varieties have purple flowers, tawny pubescence, and resistance to Roundup branded herbicides. However, 91B12 has yellow seeds with black hila and is susceptible to race 1 of *Phytophthora megasperma* var. *sojae* whereas AG1101 has yellow seeds with brown hila and is resistant to race 1 of *Phytophthora megasperma* var. *sojae*.

Exhibit D. Additional Description of the Variety

Soybean Variety 91B12

In Exhibit C we have identified variety 91B12 as susceptible to bacterial blight, brown spot, pod and stem blight, rhizoctonia root rot, bud blight, yellow mosaic, cowpea mosaic, pod mottle and seed mottle.

This does not mean that variety 91B12 is any worse for these problems than other varieties of similar maturity. Rather, we do not consider 91B12 to be immune to these problems. Therefore, we have chosen to be conservative and have identified the line as "susceptible".

Variety 91B12 is an early Group 1 variety. If Group 1 varieties are divided into tenths, the relative maturity of 91B12 is 1.1.
